

# Common Record Layout

## VOLUME II SECTION

# 3

*This section provides the Common Record layout table, which lists the valid tags that can be used in XML Schema version 5.0a as well as their valid values. Additionally, this section provides standards for the physical layout of the Common Record XML Document file. Standards on the physical layout of the Common Record XML Document file are required to ensure all systems transmitting or processing an instance of the file can do so without encountering physical constraint errors.*

## Introduction

This section provides the Common Record layout table, which lists block information grouped according to the following column headings:

- Field Number - Lists the Common Record field number
- COD Data Field – Contains the Common Record 2022-2023 tag name (Schema version 5.0a) and a description
- Minimum Length – Specifies the minimum length of the element
- Maximum Length – Specifies the maximum length of the element
- Nillable – Specifies whether or not the tag is nillable
- Data Type – Specifies the type of field (e.g. date, integer, string, boolean, etc.)
- Field Type – Specifies whether the field is a simple or complex element
- Complex Element Sequence – Specifies in which complex element and what order the tag is required to be submitted

For example: <DLSubsidized> (5th element) means that the tag is the 5th possible tag in the DLSubsidized award block.

It may not always be the 5th tag submitted, depending on whether the tags above it are required or optional but the tag will always come after tags 1, 2, 3, and 4 and before any tags listed as 6 or higher.

- Valid Field Values – Describes the acceptable content for a given Common Record element in order to pass XML schema validation
- Business Rules – Describes the acceptable content for a given Common Record element in order to pass various business rules

### Required Fields

Refer to the *Minimum Data Elements Required for Document Processing* topic in *Volume II, Section 1 – Implementation Guide* for more information.

A brief note on Required vs. Optional tags in the XSD schema. Next to each complex or simple element in the XSD are additional details regarding if the element is required or optional. If minOccurs="0" is next to the element, then that complex or simple element is optional. If minOccurs="0" is not next to the element, then that complex or simple element is required (also note that it is possible for elements to have maxOccurs="#", in this case the element can only occur the specified number of times per block). For instance, the Transmission Data element is required and is listed as follows:

```
<xsd:element name="TransmissionData">
```

However, the ReportedFinancialSummary element is optional:

```
<xsd:element name="ReportedFinancialSummary" type="cod:ReportedFinancialSummaryType" minOccurs="0" maxOccurs="120"/>
```

The ReportedFinancialSummary complex element is optional; however, if it is included, certain elements that pertain to the ReportedFinancialSummary type are required and some are optional (all complex elements within the Common Record have similar rules):

```

<xsd:complexType name="ReportedFinancialSummaryType">
  <xsd:sequence>
    <xsd:element name="FinancialAwardType" type="cod:FinancialAwards"/>
    <xsd:element name="FinancialAwardYear" type="xsd:gYear"/>
    <xsd:element name="TotalCount" type="cod:TotalCountType"/>
    <xsd:element name="TotalReportedAward" type="cod:LargeCurrencyType" minOccurs="0"/>
    <xsd:element name="TotalReportedDisbursement" type="cod:LargeCurrencyType"
      minOccurs="0"/>
  </xsd:sequence>
</xsd:complexType>

```

The intent of this Technical Reference is to describe the purpose and use of the COD Process and the Common Record. XML Standards are not presented here and should be obtained from other sources. The following is a representation of the Common Record content, for example, data elements, valid values and maximum field lengths. It does not represent the physical layout of the data transmission. The layout is depicted in a separate document, the XML schema.

Schema Version	Status	Schema Name
2.0e	Retired April 2014	NA
3.0a	Retired April 2014	NA
3.0b	Retired April 2014	NA
3.0c	Retired April 2014	NA
3.0d	Retired	CommonRecord3.0d.xsd CommonRecord3.0d-VR.xsd
3.0e	Retired	CommonRecord3.0e.xsd CommonRecord3.0e-VR.xsd
4.0a	Active	CommonRecord4.0a.xsd CommonRecord4.0a-VR.xsd
4.0b	Active	CommonRecord4.0b.xsd
4.0c	Active	CommonRecord4.0c.xsd
4.0d	Active	CommonRecord4.0d.xsd
4.0e	Active	CommonRecord4.0e.xsd
5.0a	Active	CommonRecord5.0a.xsd

### Schema Versions with Current Status

Beginning in March 2022, schools must use Version 5.0a of the Common Record XML schema for the 2022-2023 Award Year and forward.

The Common Record Layout lists elements in block sequence. A general rule regarding sequence of data within blocks, and within complex elements: the start and end data tags and their context must be presented on the XML document within the block's tags or the complex element tags to which they belong. The sequence of the data within that block or element is dictated by the sequence of the data tags presented in the 'Block Sequence' column of this document and further shown in the XML schema. For example, if a complex element has ten simple elements within it, those ten elements must occur in the same sequence as listed numerically below according to their 'Block Sequence' and depicted

---

in the XML schema. If there is any discrepancy between the information presented here and the information presented in the XML schema, the XML Schema should be considered as the correct source for the information.

---

## Full Schema Enforcement

In April 2014 COD began to perform full Common Record schema validation on all incoming Common Record batches. This full schema enforcement pertains to all valid schema versions as of April 2014. These valid schema versions include 4.0a, 4.0b, 4.0c, 4.0d, 4.0e and 5.0a. In the past exceptions have been made to allow certain invalid XML schema files to pass into the COD system. This is no longer the case and batches that do not pass full schema validation will not be processed by the COD system.

All Common Record batches submitted to COD must follow exactly the Common Record XML schema outlined in one of the below documents. For example, if the batch specifies that it has been sent in the 5.0a schema version, then the file must follow the schema presented in the following XSD documents: CommonRecord5.0a.xsd.

---

## COD XML Schema files are posted on the Knowledge Center website at [COD XML Schema | Library | Knowledge Center](#). Schema Version 5.0a Common Record Layout

The COD System upgraded to Schema version 5.0a for the 2022-2023 Award Year and forward.

### *System-Generated Responses*

All System-generated responses sent by the COD System will be enhanced to use the COD Common Record XML Schema Version 5.0a for all award years.

The existing CRSP response file currently has the Relationship to Student tag in PLUS App (SP) Response for Direct Parent PLUS Loan Applications. This will become available in March of 2022.

### *Changes to Response Block*

There are no changes to the Response Block for schema version 5.0a.

### *Changes to Transmission Data Block*

There are no changes to the Transmission Data Block for schema version 5.0a.

### *Changes to Pell Block*

The COD System will add new <IncarceratedStudentIndicator> to the Disbursement block for Pell/IASG awards only with schema version 5.0a. This tag will be an optional tag and will be valid for award years 2022-2023 and forward.

The COD System will require <PaymentPeriodStartDate> field in the disbursement block for PELL/IASG awards for award years 2022-2023 and forward.

---

The COD System will add new <PaymentPeriodEndDate> to the Disbursement block for Pell/IASG awards with schema version 5.0a. This field will be required for new disbursements submitted for award years 2022-2023 and forward.

### ***Changes to DLPLUS Block***

The COD System will add new <DirectLoanAttendanceCost> to the award block for DL PLUS awards with schema version 5.0a. This field will be required for new awards submitted for award years 2022-2023 and forward.

The COD System will add new <PaymentPeriodEndDate> to the Disbursement block for DL PLUS awards with schema version 5.0a. This field will be required for new disbursements for award years 2022-2023 and forward.

### ***Changes to DLSubsidized Block***

The COD System will add new <DirectLoanAttendanceCost> to the award block for DL Subsidized awards with schema version 5.0a. This field will be required for new awards submitted for award years 2022-2023 and forward.

The COD System will add new <PaymentPeriodEndDate> to the Disbursement block for DL Subsidized awards with schema version 5.0a. This field will be required for new disbursements submitted for award years 2022-2023 and forward.

### ***Changes to DLUnsubsidized Block***

The COD System will add new <DirectLoanAttendanceCost> to the award block for DL Unsubsidized awards with schema version 5.0a. This field will be required for new awards submitted for award years 2022-2023 and forward.

The COD System will add new <PaymentPeriodEndDate> to the Disbursement block for DL Unsubsidized awards with schema version 5.0a. This field will be required for new disbursements submitted for award years 2022-2023 and forward.

### ***Changes to TEACH Block***

The COD System will require <PaymentPeriodStartDate> field in the disbursement block for TEACH awards for award years 2022-2023 and forward.

The COD System will add new <PaymentPeriodEndDate> to the Disbursement block for TEACH awards with schema version 5.0a. This field will be required for new disbursements submitted for award years 2022-2023 and forward.

## Document Information

Field #	COD Data Field	Min Length	Max Length	Nullable?	Data Type	Field Type	Complex Element Sequence	Valid Schema Values	Other COD Rules
1	<b>&lt;CommonRecord xmlns=" " &gt;</b>  <b>Common Record:</b> The root element for the document.	NA	NA	No	NA	Complex Element with Attribute	1st element in document	<CommonRecord xmlns="http://www.ed.gov/FSA/COD/2021/v5.0a" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:schemaLocation="http://www.ed.gov/FSA/COD/2021/v5.0a CommonRecord5.0axsd">	The attribute: "xmlns", and its value: http://www.ed.gov/FSA/COD/2021/v5.0a, are together used to indicate the namespace of the elements in the XML document. The namespace convention of COD incorporates the schema version indicator. The version indicator is the "/v5.0a" component of the namespace. When schema updates are made, the version indicator must reflect the update (e.g., "/v5.0a"). This attribute and value are required on all transmissions.  The namespace must be used exactly as it appears in the Valid Schema Values column.
2	<b>&lt;TransmissionData&gt;</b>  <b>TransmissionData:</b> Nested immediately below the Common Record element, it contains the DocumentID, CreatedDateTime, Source, Destination, Software, and FullResponseCode	NA	NA	NA	NA	Complex Element	Within <CommonRecord> block, 1st element	NA	NA
3	<b>&lt;DocumentID&gt;</b>  Document ID: The Date and Time stamp with the Source Entity ID. This tag maps to the Pell Batch ID and the Direct Loan Origination Batch Identifier, the Disbursement Batch Number, and the Change Batch Identifier	30	30	No	String	Simple Element	Within <TransmissionData> block, 1st element	CCYY-MM-DDTHH:mm:ss.ff99999999	Submitting a DocumentID that is already in the system will result in a 003 batch level reject.  Once initial information is submitted to COD, new content cannot overwrite the database.

## Common Record Physical Layout

This section provides standards for the physical layout of the Common Record XML Document file. Standards on the physical layout of the Common Record XML Document file are required to ensure all systems transmitting or processing an instance of the file can do so without encountering physical constraint errors.

Examples of physical constraint errors include exceeding available memory, exceeding available disk space, or exceeding available network bandwidth (and timing out). While most physical constraint errors can be avoided by proper coding techniques on the host system, there are some error conditions best handled through the definition of, and adherence to, a set of well-defined and well-publicized standards. Such error conditions and their corresponding standards for resolution are provided in this section.

XML and its associated technologies, (XML Schema, Document Type Definitions), do not provide for a mechanism to define the physical layout of a file. In fact, XML does not depend on the physical layout of the elements by design. White space and line lengths are not relevant to the logical construction and reading of an XML document. Therefore, the Common Record XML file physical layout standards are defined as guidelines and examples presented in this Section.

### *Line Length Limitations*

#### 32-kilobyte Line Length Limitation on Mainframe System

Some mainframe systems cannot create or read a line longer than 32 kilobytes. A line consists of a string of data with an “end of line marker.” The phrase “end of line marker” in this document refers to whatever mechanism is used on a platform to terminate an individual line or record. For example, an end of line marker can be set by the writing out of a record (on a mainframe), by inserting a <CR><LF> character sequence (on a PC), or by inserting a <CR> character (on UNIX). <CR> (carriage return character) and <LF> (linefeed) are ASCII codes 13 and 10, respectively.

Systems with this limitation cannot handle a string of data longer than 32 kilobytes without encountering some type of data corruption (most likely truncation). By rule, XML ignores white space, which includes tabs, linefeeds, and carriage returns. Since XML has no means to regulate line lengths, a separate standard must be set to ensure lines do not exceed 32 kilobytes.

#### 9,999-byte Line Length Limitation on COD System

The COD System cannot process documents that contain over 9,999 bytes per line. A line consists of a string of data with an “end of line marker.” The phrase “end of line marker” in this document refers to whatever mechanism is used on a platform to terminate an individual line or record. For example, an end of line marker can be set by the writing out of a record (on a mainframe), by inserting a <CR><LF> character sequence (on a PC), or by inserting a <CR> character (on UNIX). <CR> (carriage return character) and <LF> (linefeed) are ASCII codes 13 and 10, respectively. COD will not process or acknowledge Common Record Documents that are submitted with a string of data greater than 4,000 bytes.

---

## Line Length Limitation Solution

The solution, in its general form, is to make sure an end of line marker is always set before a particular output stream of data reaches 9,999 bytes. This end of line marker should be created in the format native to the system where the file is being created.

The data transmission software used by COD and by participating schools handles the translation of end of line markers across platforms. For example, if a file were sent from a PC to a UNIX box, the <CR><LF> character sequence would be automatically changed to <CR> characters. Therefore, the insertion of an end of line marker does not have to take into consideration the platform of the destination system. This same principle holds true between mainframes (EBCDIC or ASCII), PCs and UNIX boxes.

### Standard

In order to ensure no line grows larger than 9,999 bytes, all Common Record XML files submitted to COD should be constructed with end of line markers inserted at specified points in the document. These points are tied to specific elements in the XML document. The points are:

- After the AttendedSchool element opening tag, <AttendedSchool>
- After every Student element closing tag, </Student>
- Before beginning an "Award" element opening tag, which could be <Pell>, <TEACH>, <DLSubsidized>, <DLUnsubsidized>, <DLPLUS>, and the opening tags of all other elements designated as part of the Award substitution group in the Common Record XML Schema specification
- Before beginning a Disbursement, element opening tag, <Disbursement>, for every disbursement under each of the "Award" elements listed above.

The following standard is a strongly recommended approach for schools and vendors who want to guarantee their files will not exceed the 9,999 byte limitation. If a school or vendor can ensure their submitted files will not exceed the 9,999 byte limitation by some other means, those files will be accepted by COD. However, the burden of responsibility will then rest with the school or vendor for files incorrectly submitted.

The Common Record XML Schema has been evaluated to confirm that if the above standard is maintained, the maximum size of the data sent in any one of these lines will never exceed 9,999 bytes. The maximum line size takes into account all tags, all maximum data lengths for each element, and all maximum numbers of repetitions of nested data elements.

The following example found is a skeleton submission file correctly formatted according to the end of line marker standards. In this example, for clarity, sub-elements are not listed, and the characters, [EOL], end of line, explicitly mark the end of a line.

COD guarantees the Response Document files it produces will not contain lines longer than 9,999 bytes, but the files will not necessarily match the line breaks as specified for submissions. This is due in part to the additional space used by the Response blocks.

---

## Coding Guidelines

The code should track the Common Record elements as they are written to the output stream and write out a line of XML text (via the appropriate end of line marker) as any of the EOL points are encountered. Code to construct the Common Record can vary greatly depending on the platform, libraries, and languages used, so specific examples are not provided.

### Common Record Response File Options

For more information on the length of COD Response Files, please refer to the School Options topic in *Volume II, Section 1 – Implementation Guide* for more information.
