Overview

What's in Volume 4A, Record Layouts?

This volume of the *FAFSA Processing Specifications Guide* provides the record layouts you need to create your own software to participate in the Electronic Data Exchange (EDE) process.

There may be additional changes as Federal Student Aid continues its development and clearance process of the 2027–28 FAFSA form. Additional updates will be provided as available with a final layout scheduled later this year.

High School Completion File for Decentralized State Agencies Record Layout

The High School Completion File for Decentralized State Agencies record layout contains FAFSA applicant data. This file is sent from the SAIG in the HSCI28OP message class and is sent to Decentralized State Agencies when the agency state and student's state of residence are the same.

Notes about the High School Completion File for Decentralized State Agencies:

- **Text-based, comma-delimited file** – This file type is also known as a comma-separated values or .csv file. Data in the file is separated by commas and can be viewed in any text editor. The data is organized into rows and columns with each column representing a field and each row representing a record. A comma (,) is used to separate field values within a record, and a newline character separates individual records. All fields are also encapsulated in double quotation marks (e.g., "123 Main Street").
- **Max Length** – This is the maximum number of bytes that will display for this field; however, the field could contain fewer bytes. For instance, the max length of the First Name field is 35, but if the applicant's name is "Susan" only five bytes will display.
- **Valid Content** – For fields with a maximum length of one byte, the digit included in the .csv file is associated with a value. For instance, if the High School Completion Status field contains a "3," then it indicates that the applicant was homeschooled. The .csv file will not include the text "Homeschooled."

Verification of Identity Record Layout

To facilitate Verification of Identity results reporting, you can create a comma-separated values (CSV) file with student information. After the file is created, it should be uploaded to the FAFSA Partner Portal using the batch upload, which is found on the landing page.

Notes about the Verification of Identity file:

- **Text-based, comma-delimited file** – Data in the CSV file is separated by commas and can be viewed in any text editor. The data is organized into rows and columns with each column representing a field and each row representing an individual student record. A comma (,) is used to separate field values within a record, and a newline character separates individual records.
- **Max Length** – This is the maximum number of bytes that will display for this field; however, the field could contain fewer bytes. For instance, the max length of the Student's Last Name field is 35, but if the applicant's name is "Jones" only five bytes will display.
- **Valid Content** – Editing is performed on the data before it can be uploaded, so be sure it is valid. For fields with a maximum length of one byte, the digit included in the .csv file is associated with a value.
- **Records to include in your Verification of Identity file**:
  - Students who have your Federal School Code listed on a transaction.
  - Students who were part of the V4 (custom verification group) or V5 (aggregate verification group).
  - Up to 2000 students per batch, one student per line.
