

National Student Loan Data System
MyStudentData Download
File Layout

December 23, 2018

Introduction

The National Student Loan Data System (NSLDS) MyStudentData Download allows students to download information about their loans, grants, overpayments, subsidized usage, enrollment, and addresses from the [NSLDS Student Access](#) website into a machine-readable, plain text file.

The MyStudentData Download is available from the following [NSLDS Student Access](#) web pages:

- Main Menu (Home page)
- Financial Aid Review (Aid)
- Loan Detail
- Grant Detail
- Overpayment Detail
- Subsidized Usage

Students who click the MyStudentData Download icon on any of those pages receive, as a download, a machine-readable file in American Standard Code for Information Interchange (ASCII) format. The simple text file includes their loan information (e.g., loan amount, disbursement amount), grant information (e.g., award amount, disbursement amount), as well as enrollment and overpayment information, regardless of the web page the student is on when clicking the MyStudentData Download.

To assist software vendors with designing new tools for students to maximize the usefulness of the data, we have developed the *NSLDS MyStudentData Download* file layout. This document defines the layout of the file that students can download from [NSLDS Student Access](#).

NEW! The following update has been made to the previous version of this document dated August 31, 2016:

1. The following field has been added to the **Student** section of the layout:
 - a. Student Iraq and Afghanistan Service Lifetime Eligibility Used.
Note: The addition of this field shifts the position number of the remaining field in this section.
2. Loan Type valid value name was changed in the **Loan Type Total** and **Loan** sections (documentation change only):

Current Loan Type value	Previously documented Loan Type value
FEDERALLY INSURED (FISL)	FEDERAL INSURED (FISL)

NSLDS MyStudentData Download File Layout

The MyStudentData Download file is made up of name:value pairs separated by colons. Each name:value pair occupies a new line of the file. Individual pairs do not occur in fixed positions, as they would in a fixed-length flat file or a formatted report, and they are not tagged to identify their nature or cardinality, as they would be in an eXtensible Markup Language (XML) file. This is because there is no way to specify in advance how many loans, grants, aid overpayments, or program enrollment records each student may have, or how many disbursements or statuses each loan may have.

However, pairs will always occur in the same order within the various subsections of the file. A student's first name, if she has one, will always occur before her middle initial and last name. The status for an individual loan will always occur before the status description or status effective date. The combination of position and name should allow users or third-party software vendors to identify the contents of each name:value pair.

The relationships between the different parts of the download file can be expressed in tabular form as follows.

Root	Has	Has	Has
File	1 Student	0-24 Loan Type Totals	
		0-50 Loans	1-50 Statuses
			0-25 Disbursements
			0-3 Contacts
			0-1 Special Contacts
		0-40 Grants	0-1 Contacts
		0-10 Aid Overpayments	0-1 Contacts
			0-1 Special Contacts
		0-300 Programs	0-300 Statuses
		0-50 Awards	

An example created from the MyStudentData Download output using this file layout is provided in Appendix A.

The layouts that follow identify position, name, format, and maximum length for each value. The lengths of both name and value fields are variable.

- Field names vary from nine to 65 characters in length.

- Field values vary from one to 253 characters in length, although an email address that long is very unlikely.

Students who click the MyStudentData Download on the English language site will see only the English name for each pair. Students who click the MyStudentData Download on the Spanish site will see only the Spanish name. Both will see most non-numeric values displayed in English, as that is the language used to store information on the NSLDS database.
